This seventh class includes 15 tech startups from seven African countries, with Cote D'Ivoire joining for the first time. The class was selected from thousands of applications, with a final selection based on product stage, program alignment and market fit.

Over the next three months, they will work with Google mentors and facilitators learning best practices on a range of topics including Artificial Intelligence, Big Data, organisational culture, growth strategies and more.

Google for Startups Accelerator Africa programmes is organised around a virtual bootcamp concept that includes seminars, one-on-one coaching sessions, and peer-to-peer learning opportunities. Bootcamps will take place in March, April and May.
