Propelair rethinks washroom spaces to positively impact climate change

The <u>Propelair</u> toilet uses technology to offer substantial water savings when flushing. It replaces approximately 7.5 litres of water with 60lt of air to achieve an 84% water saving, per flush, enabling customers across the globe to positively contribute to water savings and ultimately change the way the world consumes water.

Because of the growing scarcity of drinking water, we purposefully drive our ambition of 'being the sanitaryware business

with the greatest impact on water savings'. By targeting public and commercial washrooms with a water savings solution, we attend to the area that accounts for up to 90% of water consumption in public areas. With toilets wasting almost half of this grand total, our core drive expanded to not only provide a <u>water saving solution</u> but one that also makes financial sense, making a Propelair installation a simple and easy decision to make.

In addition to saving water and the cost of water, we also contribute to better waste management and significantly lower carbon footprint due to the reduced processing of water and wastewater. The Propelair system conveniently connects to existing plumbing systems, making it easy to retrofit. It is also ideal for off-grid buildings where waste removal is costly.

It pays to save! Visit our webpage now to calculate your savings and learn how to purchase a Propelair toilet.
