

Gemalto introduces IoT solution

Digital security company, Gemalto has launched its LinqUs IoT Quality of Service (QoS) which will ensure reliable connectivity for M2M devices. The service enables mobile operators to monitor the cellular QoS of smart objects in real time.

Gemalto's LinqUs IoT Quality of Service is suited to a wide range of use cases, including automotive, fleet management, smart grid, alarm panels and connected PoS applications. Mobile operators can provide their device manufacturer and service provider clients with clear visibility of network and connectivity performances, facilitating Service Level Agreements and creating a highly effective means of differentiation.
