# SUSE, CTU in open source training partnership

Enterprise Linux solutions provider, SUSE South Africa, has entered into a strategic partnership with CTU Training Solutions that will see the institution provide training based on the current SUSE certification programme.

This includes Certified Linux Administrator, Professional, and Expert levels, as well as advanced technical tracks such as for SUSE's private cloud IaaS-solution SUSE OpenStack Cloud, the comprehensive Linux server management solution SUSE Manager, and the software based storage solution SUSE Enterprise Storage. Additionally, CTU will offer new SUSE courses and updated versions of existing programmes as they become available throughout its network in South Africa.
