

## Japanese inn uses Nissan's autonomous driving technology for amenities

The ProPILOT Park Ryokan in Hakone, Japan has combined Nissan's autonomous driving technology with the slippers, tables, and cushions provided at the inn. The amenities are fitted with a special version of Nissan's ProPILOT Park autonomous parking technology; when not in use, they automatically return to their designated spots at the push of a button.

The technology is being used at the ProPILOT Park Ryokan during a demonstration to entertain guests and reduce staff workload.
